

The Training Center is our local facility in Sutton, which hosts advance technologies for learning. All of our courses are taught within the building, which offers a computer lab, and access to high speed Internet. In 2007 we began renovations to a grocery store, in order to create a training facility available to the public. The building was renovated to be as environmentally friendly as possible. The building uses many green products, which overall, make a green building. These include specialized insulating paints, solar hot water tanks, dual flush toilets, upgraded boiler, low flow hands free faucets, and radiant floor heating. Even the floor is environmental epoxy flooring, which is highly reflective, and therefore, reduces required lighting by 15%. 3
